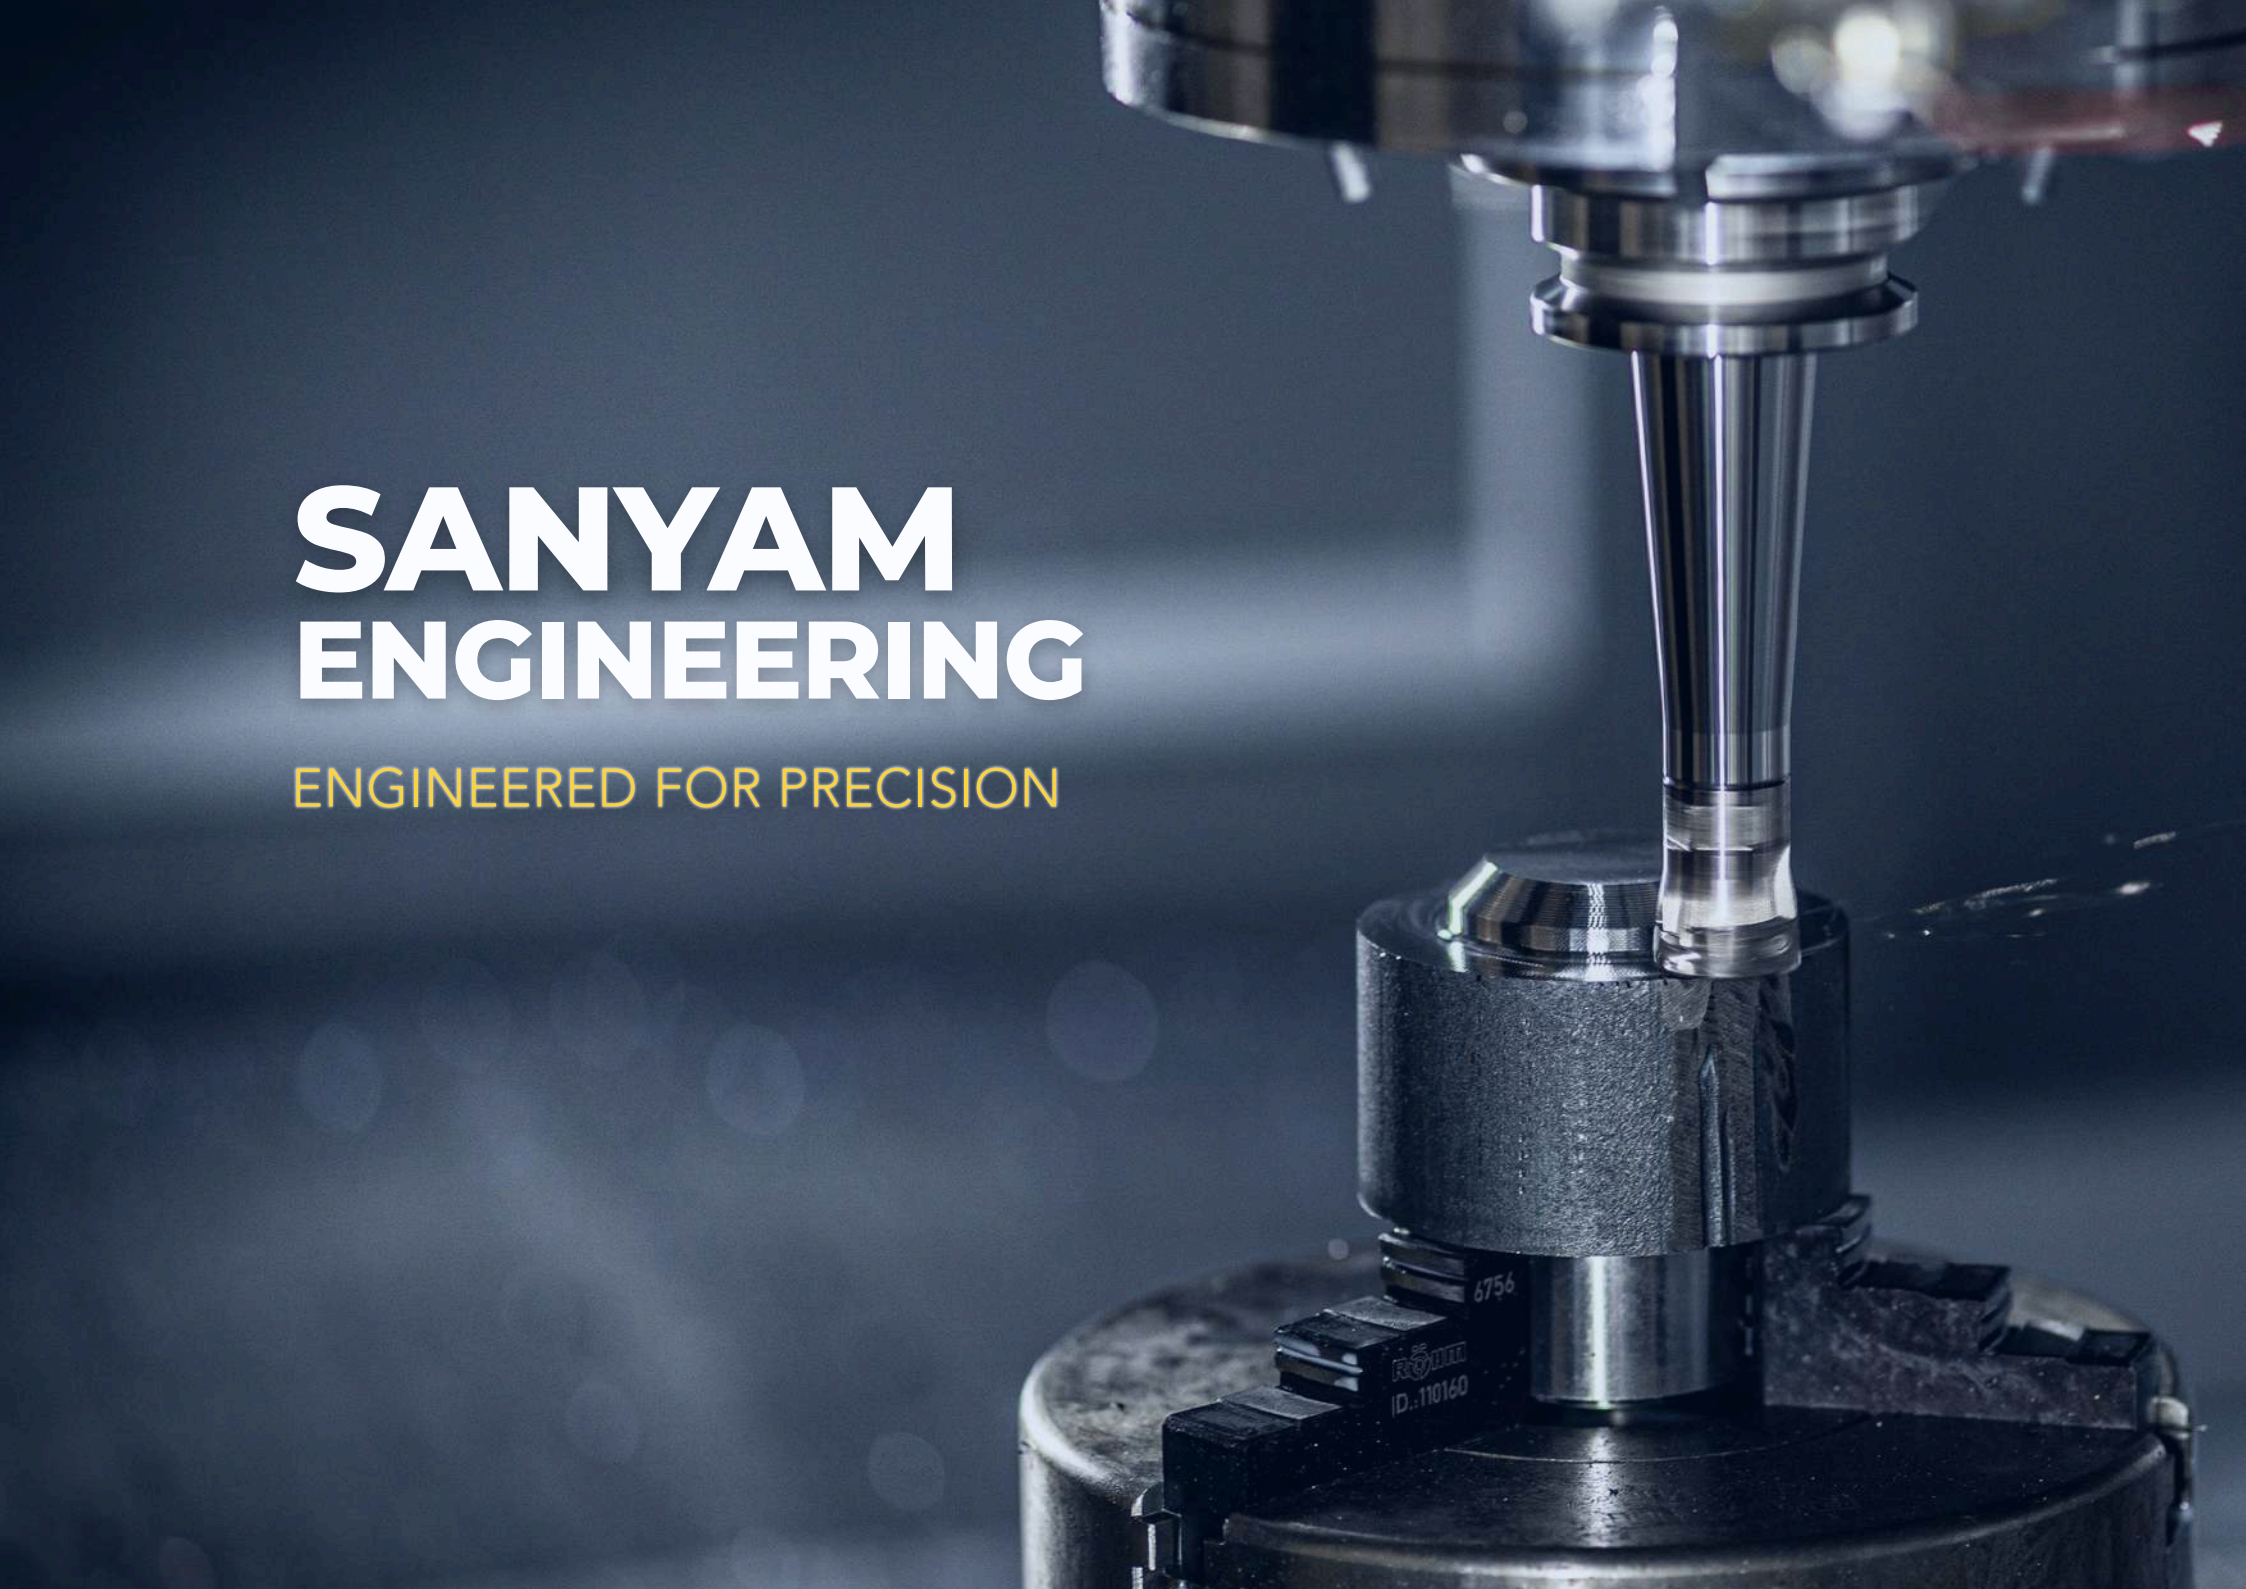
SANYAM ENGINEERING

ENGINEERED FOR PRECISION



WHO WE ARE

OUR VISION

We are not a conventional machine shop.
We operate at the intersection of precision machining, material behavior, and real-world application demands.

Every component we manufacture is approached with a clear understanding of how it will perform — not just how it is drawn.

WHAT SETS US APART

- High-efficiency products, uncompromised quality
- Premium raw materials, always
- Fast delivery, even at large scale
- Continuous innovation & improvement
- Long-term, trust-driven relationships with clients and partners

Our processes are tuned for predictability under stress, temperature, and wear — not just inspection approval

OUR EXPERTISE

01

UNCOMPROMISED RAW MATERIAL QUALITY

Premium, unadulterated raw material ensures consistent quality and durability across all products.

02

EXPERT PRODUCT GUIDANCE

We question drawings where it matters — because performance is defined in operation, not on paper.

03

HIGH PERCISION & FAST DELIVERY

Advanced automation and skilled CNC supervision enable quick, accurate production even for large orders at short time.

CORE CAPABILITIES

MATERIAL INTELLIGENCE

Complete traceability through identification tags & route cards

CONSISTENCY AT SCALE

Consistent accuracy and performance across large-scale production

PRECISION PARTNERSHIP

Dedicated team for insights on durability, reduced wear & extended product life

ENGINEERING EXCELLENCE

An expert team uses advanced CAD-CAM technologies to create jigs, fixtures, and specialized tools in-house.

From raw material traceability to precision engineering, every stage is monitored, tested, and optimized for quality and consistency.

TOTAL CONTROL. ABSOLUTE CONFIDENCE.

MACHINES

- CNC Turning Centre
- Vertical Machining Centre (VMC)
- Automated Angle Drill Machine
- CNC Laser Cutting Machine

ADVANCED TOOLS

- Tungsten carbide insert
- Coated carbide insert
- Cermet insert
- Ceramic insert for hardened material
- Cubic boron nitrate
- Polycrystalline diamond insert

INTELLIGENT TOOLING. SUPERIOR PERFORMANCE.

01 Advanced high Feed Milling technology for higher productivity while maintaining dimensional stability and superior surface finish.

02 Wiper Geometry Inserts enables high feed finishing with superior surface roughness (Ra improvement up to 50%)

03 Variable helix cutting tools to eliminate chatter and ensure superior surface integrity in complex geometries.

04 Application-specific inserts coated with TiAlN / AlTiN ensure extended tool life and consistent machining performance across diverse materials.

06 Material-specific insert selection strategies to optimize machining performance, tool life, and surface finish.

07 Indexable multi-edge tooling ensures cost efficiency and consistent quality across high-volume production.

08 Tooling strategy is customized for each component based on material, geometry, and tolerance requirements

10 Advanced tool condition monitoring and predictive tooling strategies are implemented to minimize variability, prevent tool failure, and ensure consistent machining quality.

INDUSTRIES WE POWER

Boiler Manufacturing

Textile Industry

High pressure nozzles

Motors

Automotives
Pharma Industry

Oil & Gas Industry

Chemical Industry

PRODUCTS

About Us

Built right the first time—no corrections, no compromises.
